Project Setup Instructions

Step 1: Clone the Repository

git clone https://github.com/mehardil/mini-transaction-tracking-system.git

Step 2: Move to Project Directory

cd mini-transaction-tracking-system/

Backend Setup

Step 3: Move to Backend Directory

cd backend/

Step 4: Install Python Dependencies

pip install -r requirements.txt

Step 6: Create Database

Option 1:Using Command Line

1)CREATE DATABASE transaction_tracking;

2)mysql -u username -p transaction_tracking < transaction_tracking.sql

Option 2: Using a SQL Editor

- Open your preferred SQL editor
- Open the file transaction_tracking.sql.
- Run the SQL queries inside the file to create all tables and initial data.

Step 8: Start Backend Server

➢ **uvicorn main:app –reload**

Make sure you are **inside the** backend **folder** before running this command.
The server will start at: `http://localhost:8000` by default.

frontend Setup

Step 9: Move to Frontend Directory

cd transaction-tracking-frontend/

Step 10: Install Node.js Dependencies

using this command install node dependencies

- **npm install**

Step 11: Start Frontend

using this command start react frontend

- **npm start**
- **http://localhost:3000/ (open this url)**
